Announcement in Case Management Modeling and Notation (CMMN)

[Invitation to participate in a short online CMMN tutorial and survey.](#)

Mike Marin
Distinguished Engineer at IBM

Dear Prospective participant,

We are conducting research on complexity metrics for the Case Management Modeling and Notation (CMMN) specification and need your help as a participant. You don't need to be familiar with CMMN to participate, but you should have some basic experience with process technology. Participation is voluntary and no identifiable personal information will be collected.

You may benefit from the CMMN tutorial; and you may gain some experience and appreciation for CMMN models by evaluating the two models in this exercise. There are no foreseeable risks associated with the study. This online tutorial and survey should take about 45 to 60 minutes to complete, but it can be done in multiple sessions. The tutorial is optional and it should take 30 to 40 minutes. The survey should take 15 to 20 minutes. You can consider the survey as a quiz on the CMMN tutorial.

As an appreciation for your collaboration, we will donate \$6 (six dollars) to a charity of your choice and we will provide you with early results of the survey and notify you when the final results are published. You were selected to participate on this project because you are an active member in a business process or case management list. We apologize if you received this invitation via multiple lists.

You can use the following URL to take the tutorial and survey.
The first couple of pages provide more information on the project, the tutorial, and the survey.

<http://cmmn.limequery.org/index.php/338792?lang=en>

Please feel free to forward this invitation to others that may benefit from participating or that may want to participate in this research.

Thank you in advance for your participation. If you have any questions about the research, please contact the principal investigator, Mike Marin, via email at [mmarin\(at\)acm.org](mailto:mmarin@acm.org). This research project has been reviewed and approved by the University of South Africa's School of Computing Ethics Committee for the Protection of Human Subjects.

Regards,

Mike Marin
